***PROJECT TITLE: CREATING & SECURING A MICROSOFT 365 USER WITH CUSTOM DOMAIN***

***Author: Precious Iwuozor***

***Date: 29/09/2025***

## *INTRODUCTION*

In today's cloud environment, secure identity management is foundational to every organization's digital strategy. This project demonstrates a complete, hands-on workflow for creating and configuring a new user in Microsoft 365 using a custom domain an essential step for establishing a professional and branded identity.

The process includes provisioning the user account, assigning appropriate administrative roles based on least-privilege principles, configuring user details, and enabling multifactor authentication (MFA) to safeguard against unauthorized access. I also performed a password reset to enforce secure onboarding and verified the user's ability to sign in successfully.

Additionally, I assigned a Microsoft 365 product license to activate core services such as Outlook, Teams, and SharePoint, ensuring the user had access to the tools necessary for productivity and collaboration.

This project reflects best practices in cloud identity governance, combining technical precision with a strong emphasis on security, scalability, and user experience. It serves as a practical example of how to manage users in Microsoft 365.

## *1: TOOLS & ENVIRONMENT*

- Microsoft 365 Admin Centre
- Custom Domain (e.g., yourdomain.com)
- Microsoft Entra ID (formerly Azure AD)
- MFA via Microsoft Authenticator

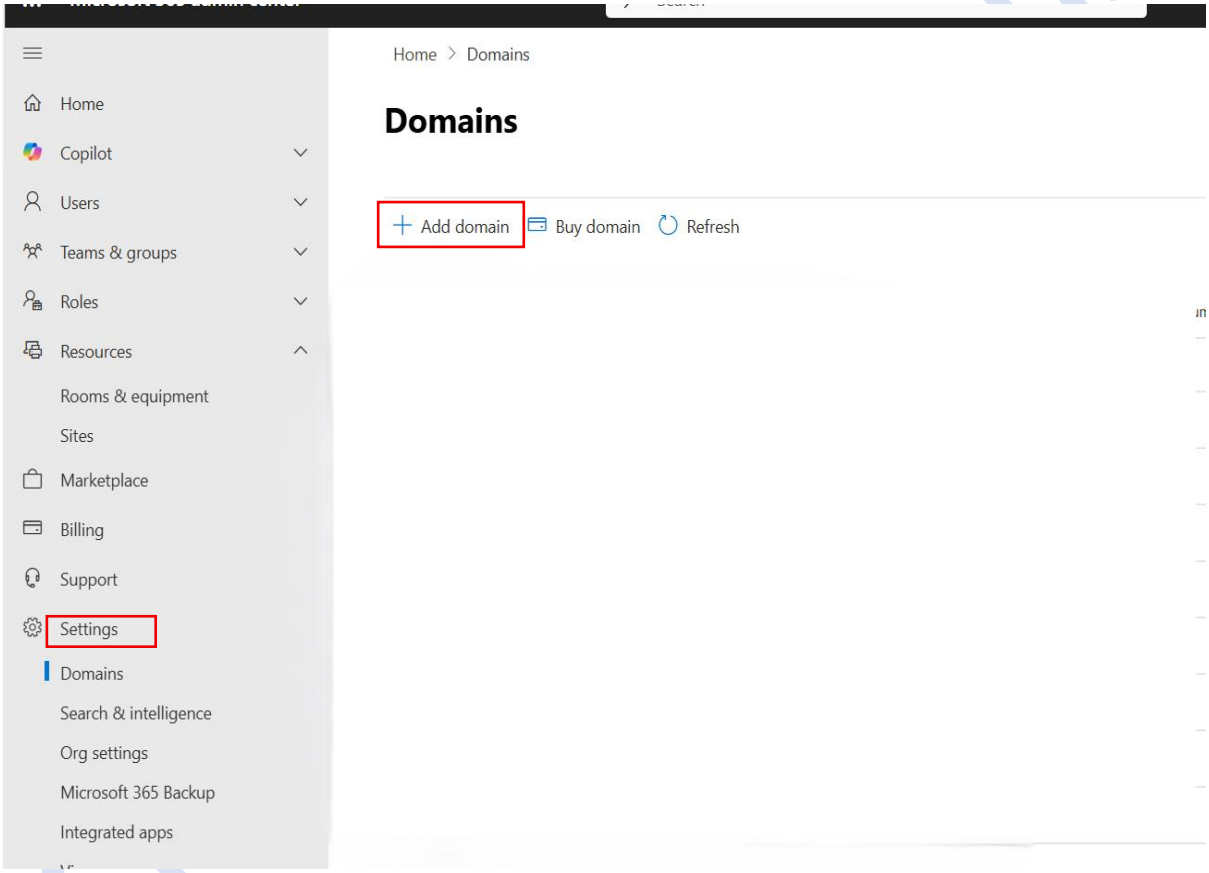

Created By Precious

***2: STEP-BY-STEP GUIDE***

***STEP 1: ADD CUSTOM DOMAIN***

• Go to Microsoft 365 Admin Center → Settings → Domains

• Click Add Domain and follow verification steps

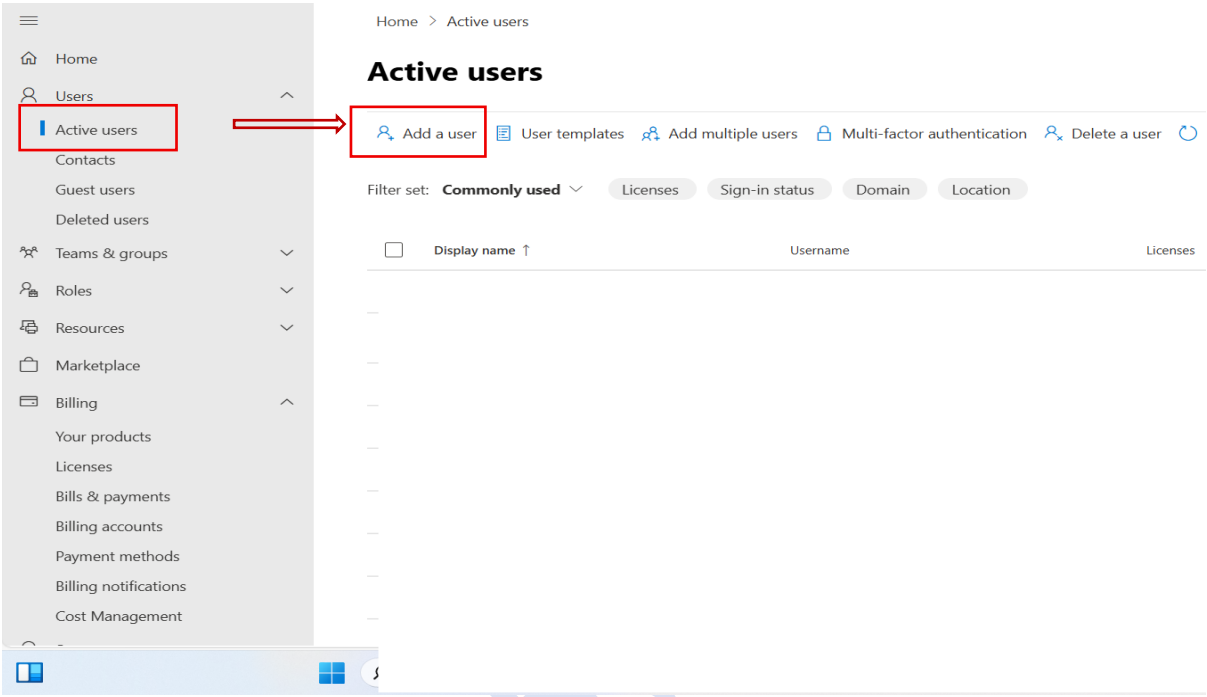

***STEP 2: CREATE NEW USER***

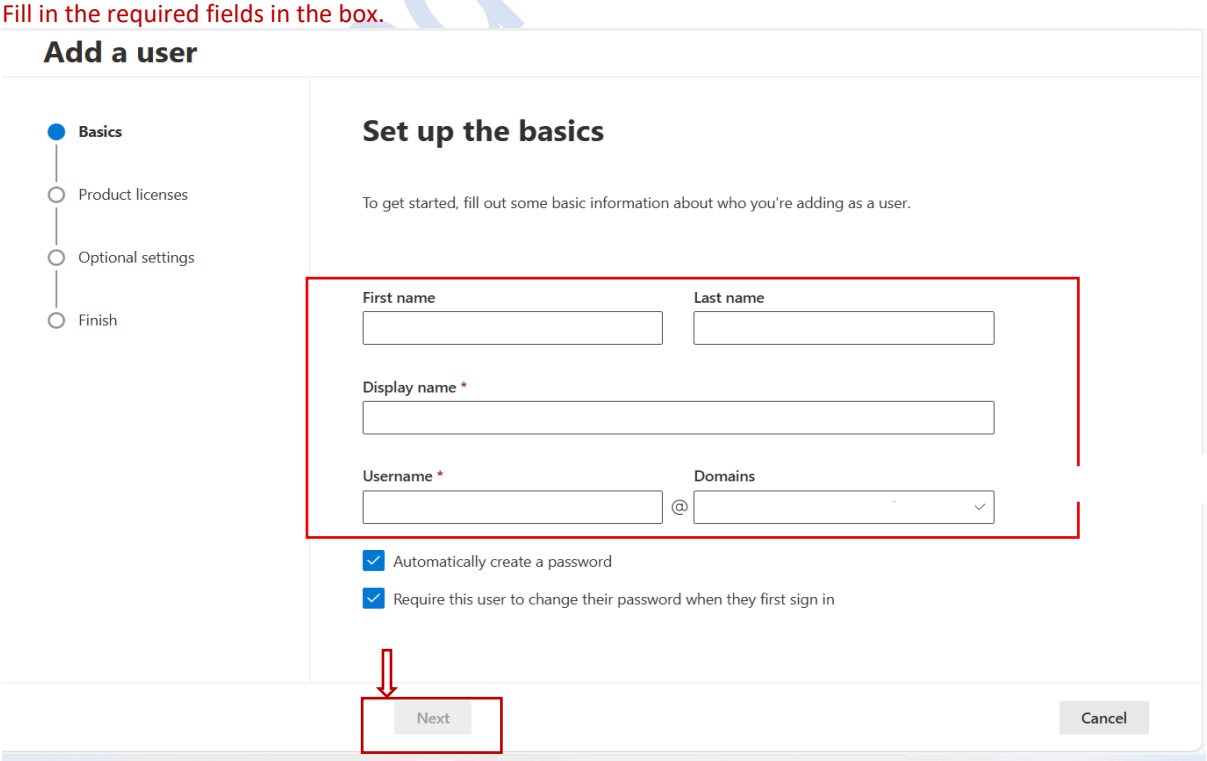

• Navigate to Users → Active Users → Add a User

• Fill in user details: name, username, domain

• Assign license (e.g., Microsoft 365 Business Standard)

Fill in the required fields in the box.

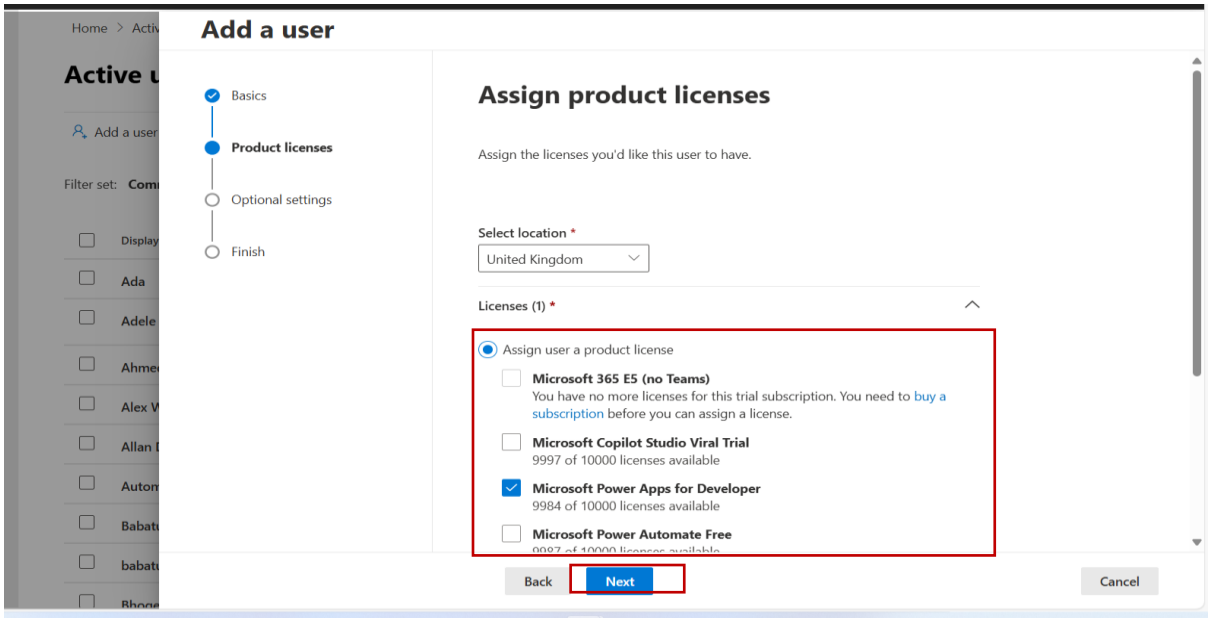

***STEP 3: ASSIGN LICENSE TO THE USER***

Assign a Microsoft 365 license to activate their services.

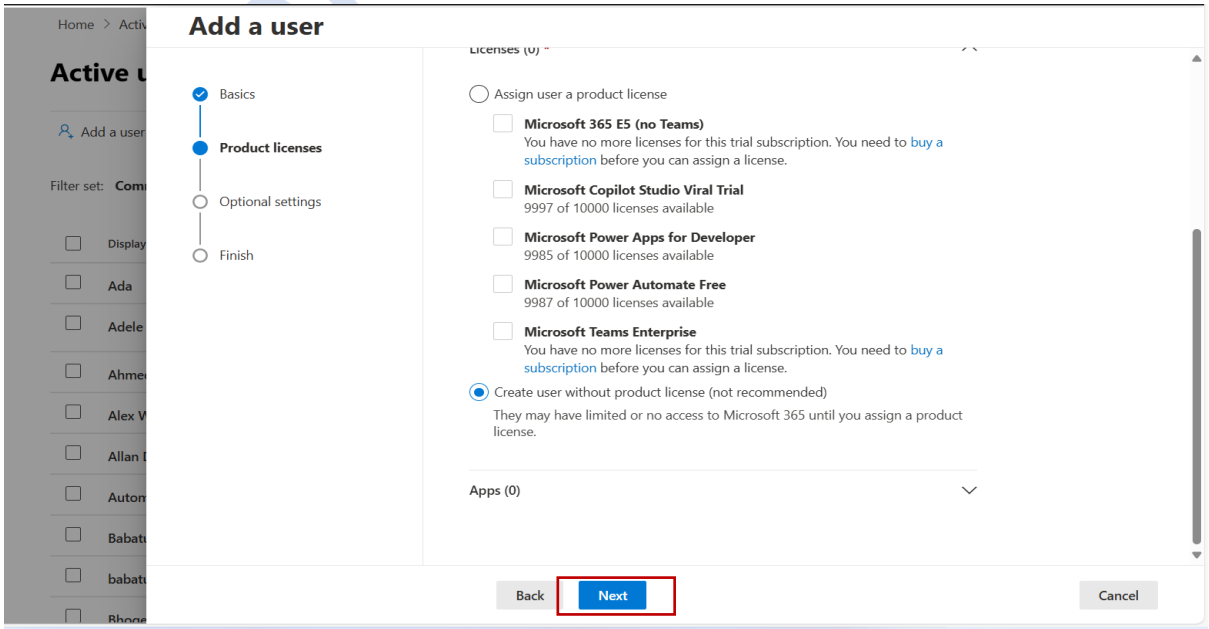

Instructions:

• Choose the appropriate license (e.g., Microsoft 365 Business Standard)

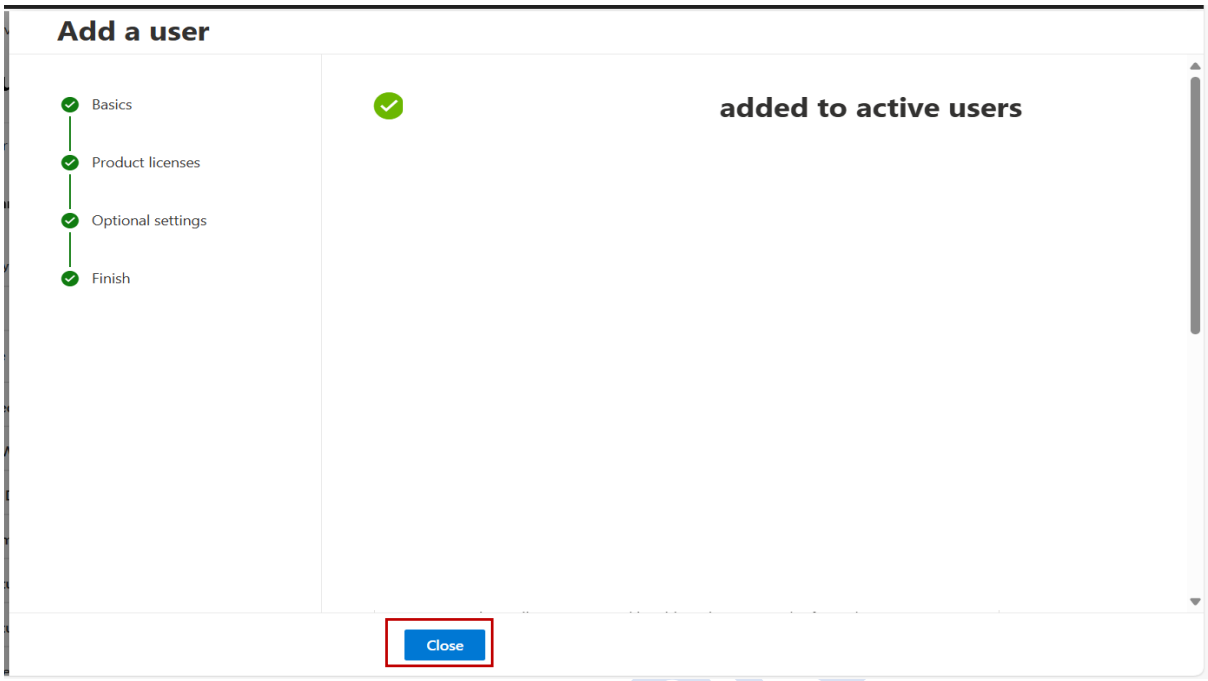

• Click Save changes

You can choose to create a user without a product license and assign it later. However, the user may have limited or no access to Microsoft 365 services until a license is assigned.

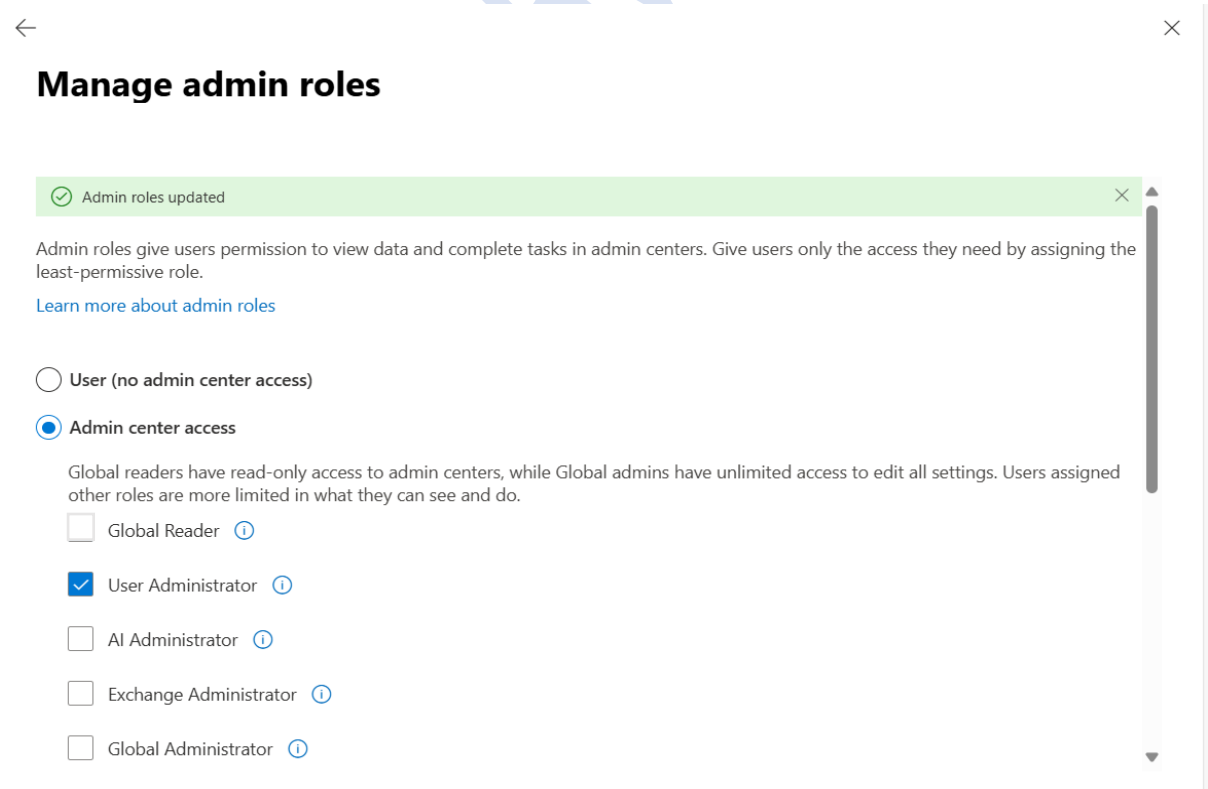

After completing the setup, I confirmed the user was successfully created in the Microsoft 365 Admin Center.

***STEP 4: ASSIGN ROLES***

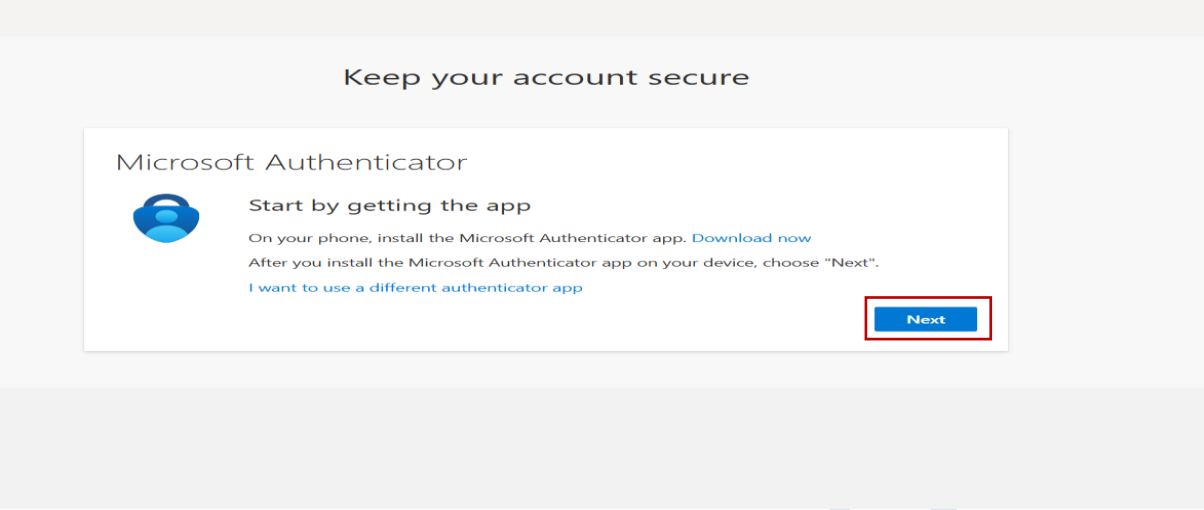

• In user profile, click Manage Roles

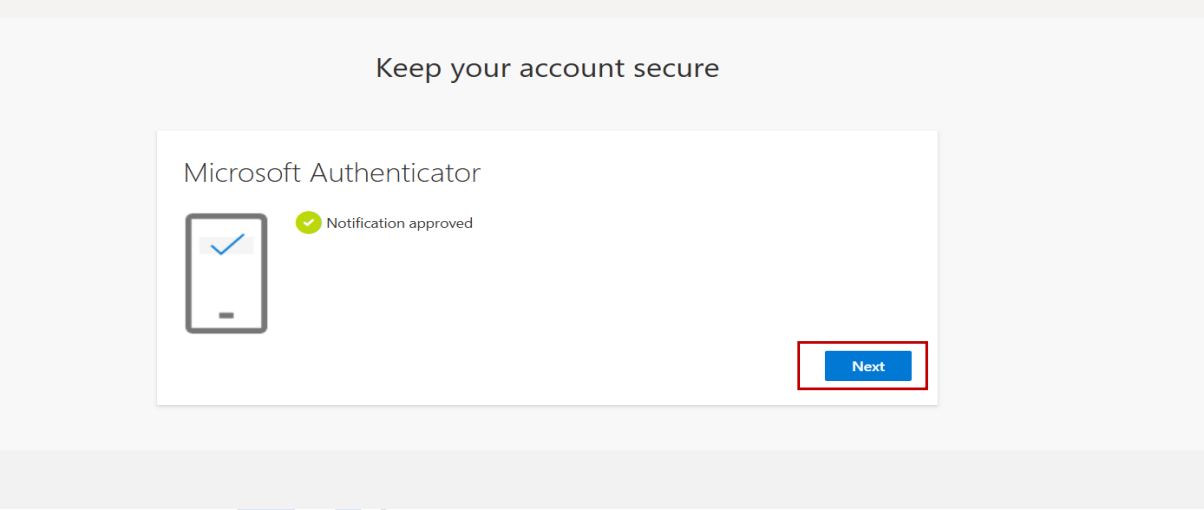

• Assign appropriate role (e.g., User Administrator)

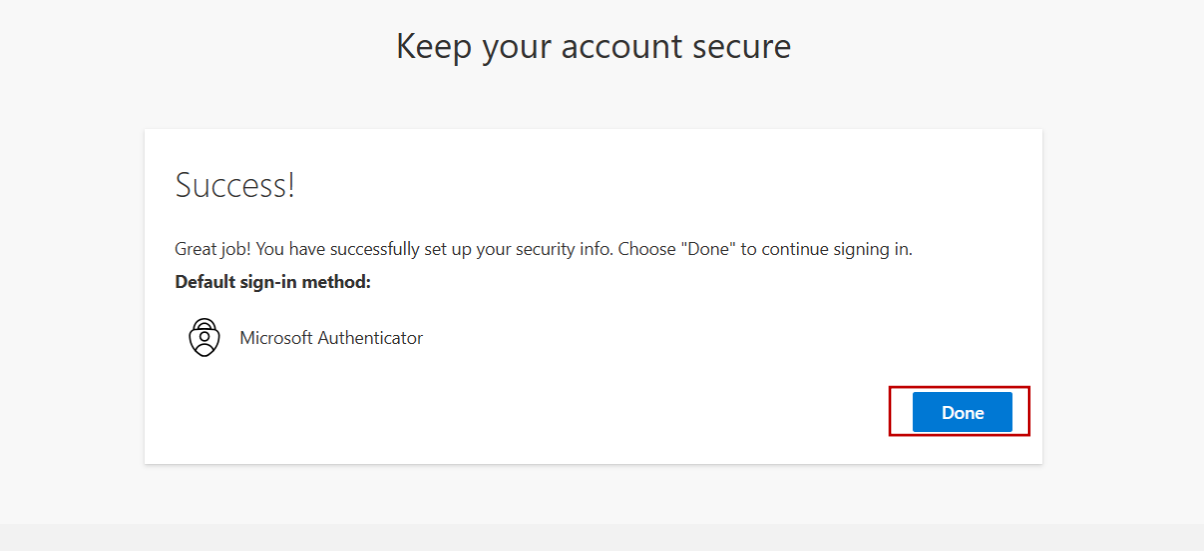

***STEP 5: ENABLE AUTHENTICATION***

- Go to Microsoft Entra Admin Center → Users → Per-user MFA
- Enable MFA for the new user

***STEP 6: RESET USER PASSWORD***

Instructions:

• Go to Microsoft 365 Admin Center → Users → Active Users

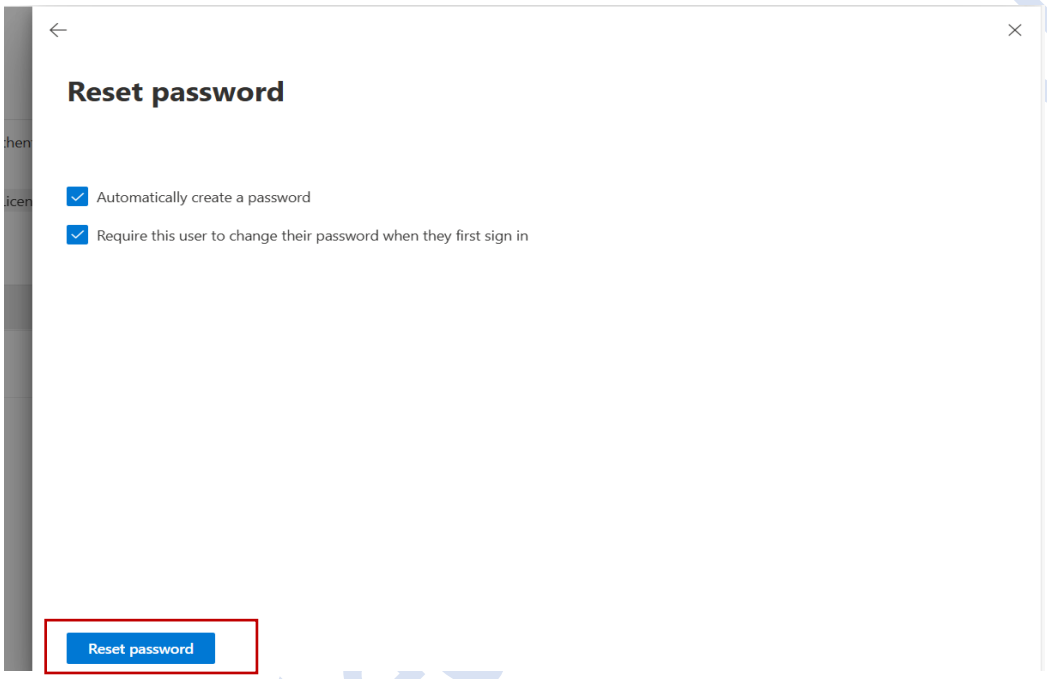

• Select the newly created user

• Click Reset Password

• Choose to auto-generate or manually set a password

• Decide whether to require password change on next sign-in

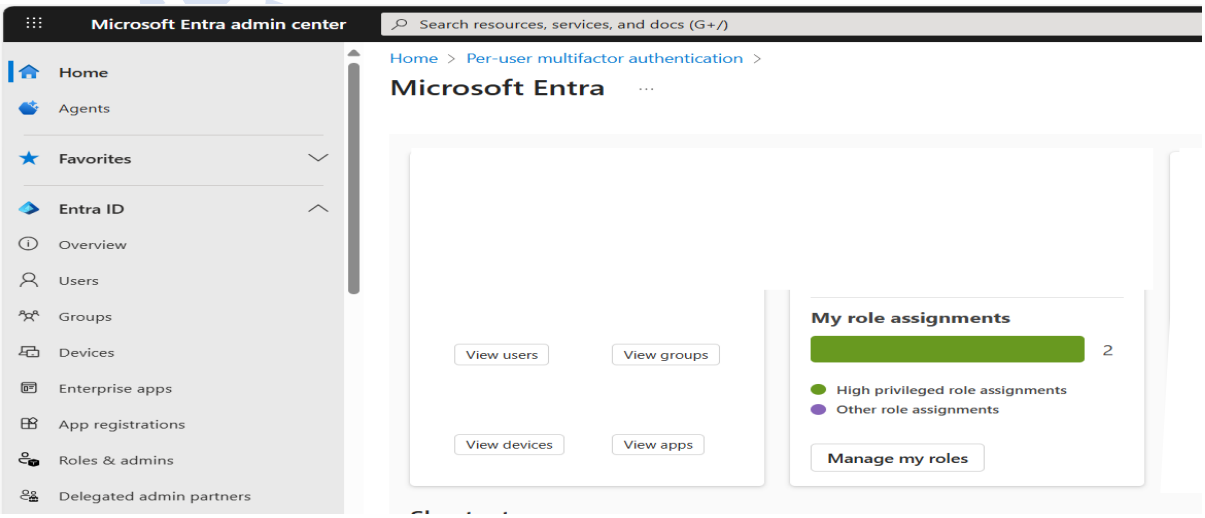

• Click Reset and copy the password securely

***STEP 7: SIGN IN VERIFICATION***

• Log in as the new user

• Confirm successful sign-in

***4. RESULTS / VALUE***

- User created securely with custom domain
- Role-based access control applied
- MFA enabled for enhanced security
- Sign-in verified successfully

***5. KEY TAKEAWAYS***

- Always assign least privilege roles
- Use custom domains for professional identity
- Enable MFA for all users
- Document steps for audit and training
